

**PRE-REQUISITES**  
**PROJECT OBJECTIVE**

Team ID	PNT2022TMID27859
Project Name	University Admit Eligibility Predictor

**OBJECTIVE:**

- University admit eligibility predictor aims to help the students with not just filling the application forms but also give them the insight about the level of eligibility by their cut-off based on prediction.
- Helps to understand regression and classification problems as this application makes use of real time algorithms like regression and different algorithms accordingly a trustful result is given to the users.
- To grab insights from data through visualization and evaluation metrics. Also it helps to know how to build a web application
- Disregarding their academic scores, the application helps to find the most compatible university based on the criteria on either, which is the university and the user. Henceforth also helping the application to list all the universities they will be eligible to.
- The students will have to give the details about their scores, through which the application makes of the provided data and gives them the results. This will make the admission process easy, time efficient, and money efficient instead of going to the college in person.
- The application aims to solve real time problems and to grab insights from data to visualization for further development and updating of the website.
